

**DISTRIBUTED GENERATION  
INTERCONNECTION RULES WORKSHOP**

**PROPOSED  
INTERCONNECTION  
AGREEMENTS  
AND  
APPLICATIONS**

Tom Dossey

# Interconnection Agreements

- Agreement attached to Staff Report is for “self-service” (non-export) applications only
- Proposal is to develop a “family” of agreements
- Other Agreements to be developed for Net Energy Metering, QF Sales to Utilities, etc.
- WDAT and TO Tariffs include agreements that are currently available for transactions with ISO

# **Proposed Agreements Have Not Been Finalized**

- Provided to show direction & style
- Could be further simplified
- Rely on fully developed common Rule 21
- Indemnity, insurance, and other provisions unresolved

# **Proposed Applications Have Also Not Been Finalized**

- Ambition is to keep initial correspondence simple, but document all necessary information
- Like agreements, proposal is to have different applications for different interconnection objectives
- Technical Group finalizing information requirements for screening process
- Application Process intended to be a “two-way” exchange of information
